Skills

Franck, that's me. A few years ago all I knew how to do was electricity, but then I went to university and studied computer engineering. afterwards I realized that university was not enough (this is after having obtained my diploma), the few courses did not allow me to do much in web development, I already had the basics but I wanted to learn the international web development standards (a matter of standardizing my code style) this is how I followed up with Microverse (a 7-month training course, based in the USA). This training helped me by giving me the necessary basics in **JavaScript, React, Ruby, Ruby on rails, and of course HTML5 and CSS3**. But after the training I had to redo all the materials, and also continue to code some real projects, a matter of increasing my knowledge, of course I am engaging, but since I don't have a job I spend my time refining my knowledge and working on open source projects.

Education

Microverse

Holder of a full stack developer certificate at Microverse (USA) with more than 1300 hours of training

ULPGL / Goma

Holder of a diploma (BAC + 5) in computer engineering, after 6 years of training at the university

Expérience

While training at Microverse, I had the opportunity to work on lots of projects while benefiting from a code review by people already working in the tech industries, while collaborating with people from all over the world.

This is how, at Microverse, I built the first form of my portfolio, which in fact I am redoing at the moment, given that I have already gained a lot in skills, the one I had done before does not represent me more better (unfortunately this is the one I'm going to send you because I haven't finished the new one yet but it will be available before this Tuesday March 26, 2023)

I am able to build any front end I see without any difference. I am also able to draw inspiration from what I see and build better (Kerygme)

Now I'm also working on a site that looks like medium, but with some small advantages, it's supposed to be published this Monday, I built it with React as the frontend and Ruby on rails as the backend

All this I do as a self-location worker so I stay on the lookout for new opportunities

Awards and recognitions

I worked as a volunteer helping junior developers by mentoring them Afterwards I was also recognized for my skills and I participated in revising the codes of my comrades
